Summary

Backend software engineer with 2+ years building production APIs, identity systems, and complex domain features in **C# / ASP.NET Core (.NET 10)**. Core contributor to a **multi-tenant, multi-database CRM** serving hundreds of sales teams. Shipped an **OAuth2 SSO identity provider** with a reusable **NuGet auth library**, optimized SQL on million-row tables from 30 s to under 1 s, and reduced API latency 50–75% through targeted caching.

Skills

Backend: C#, ASP.NET Core Web API, Entity Framework Core, Dapper, LINQ, Dependency Injection, Middleware, REST APIs, OAuth2/OIDC, JWT, MVC (Razor)

Data & Caching: Microsoft SQL Server (T-SQL, stored procedures, query tuning, indexing), Redis (caching, Pub/Sub), Fluent Migrator

DevOps & Observability: Docker, Kubernetes, Jenkins, Kustomize, Elastic Stack (Elasticsearch, Kibana, Logstash, Filebeat, APM), Git

Testing: SpecFlow (BDD), Postman, integration testing

Other: Flutter (BLoC, Riverpod), Vue.js, JavaScript, Python, Rust

Experience

Software Engineer, DeltaX – Bangalore, India

Oct 2025 – Present

Core backend contributor to Birdigo, a multi-tenant, multi-database mobile CRM platform.

- Containerized **ASP.NET Core microservices** with **Docker** and automated deployments to **Kubernetes** via **Jenkins + Kustomize**, replacing manual multi-step releases with a single-pipeline trigger.
- Designed an event-driven cache invalidation system using **Redis Pub/Sub** to synchronize in-memory caches across distributed instances, eliminating stale-read issues.
- Deployed the **Elastic Stack** on Kubernetes via the ECK Operator; centralized container logging and enabled **Elastic APM** for end-to-end request tracing across all services.
- Built **Google Meet integration** for in-app appointments using the **factory pattern** (extensible to Zoom/Teams); integrated **Google Maps APIs** for geocoding and proximity-based lead-to-store transfers.

Associate Software Engineer, DeltaX – Bangalore, India

Sept 2023 – Sept 2025

- Built a fully **OAuth2-compliant SSO Identity Provider (ASP.NET Core, OIDC, JWT, Redis)**: M2M and interactive flows, token rotation, refresh tokens, OTP login, Google/Apple sign-in. Authored a reusable **NuGet auth library** (middleware + token generator) adopted across all microservices.
- Diagnosed and refactored **SQL Server stored procedures** and indexes on million-row tables; **cut lead query time from 30 s to under 1 s** and reduced call-log latency by **80%**.
- Implemented aggressive **Redis + in-memory caching** for high-read, low-write entities, **reducing overall API latency by 50–75%** across the platform.
- Designed **Nests** (lead lifecycle engine): configurable field mappings, a **state-machine** for status transitions with per-status rules, automation triggers on state changes, and filtering by status/user/label. Extended the model for **B2B Opportunities** with company-associated leads, contact roles, and multi-stakeholder workflows.
- Redesigned the **labels system** into a polymorphic, entity-agnostic architecture — same labels configurable across leads, call logs, companies, contacts, and their sub-entities (attachments, notes).
- Built an **Insights API** with configurable date-range aggregations for lead and call-log status breakdowns; implemented **RBAC-style access filters** for multi-number WhatsApp chat with per-store and per-user scoping.
- Wrote **SpecFlow BDD tests**, maintained **Jenkinsfiles** for all microservices, and automated Flutter CI/CD via Jenkins + Fastlane with staging and production channels.

Projects

- **Offline e-Visitors' Book for INS Vikrant (Indian Navy)** 🇮🇳: Built a complete offline-first system in **Flutter** for the Indian Navy's aircraft carrier, capturing handwritten comments and photos without network access. Deployed on a **Raspberry Pi** kiosk; remains in active use on-board.
- **VSCode Activity Visualizer** 🇮🇳: VSCode extension (**JavaScript + Rust** backend) generating SVG, auto-committed to GitHub profiles via **GitHub Actions**.

Education

Amal Jyothi College of Engineering, BTech in Computer Science and Engineering – CGPA: 9.24/10

2019 – 2023
